

STEP Energy Services' nitrogen transport units support nitrogen and coiled tubing operations including assisting in underbalanced milling or cleanout operations and coiled tubing purging. The units are designed with pressure build or hydraulic pump off capabilities, increasing the versatility of our nitrogen fleet.

The integration of a nitrogen fleet into STEP's coiled tubing services minimizes logistical concerns and increases job efficiencies allowing STEP to address individual needs of its customers and enhance the quality of its service.

### Features and Specifications

- Up to 22,500 scm (795,000 scf) storage tank capacity
- Pressure build and hydraulic pump off capabilities
